

Day-3

Note

Data types: A datatype is a classification that tells a computer what kind of value.

A variable holds and what operation can be performed on what data.

There are 2 type of datatypes.

* Single Valued Datatype

int, float, complex, Boolean,

* Multi-Valued Datatypes

str, list, tuple, set, dictionary

it is also called as data structures.

* Single Valued hold one value only.

* Multi-Valued Hold Multiple Values.
