Day 2

Comment

A part of the code but want execute at run time

There are 2 types of comment;

1. Single line comment

   # Single line comment represented by hash

2. Multi line comment

   ''' Multi line comment ''' or """ """   `''''`

Keywords

Keywords — This are the reserved words use for particular task and can't use this words are identifiers (variables name or function names)

eg. def, if, else, for, true, false -...etc.

Variables

Variables — It is to store the values with specific Variable name.

- Valid variable declaration = A = 5, b = 12, Num = 123, Stru_ename = "Allen", Num1 = 2344, Num2 = 987, -Snde Mark = 78;

- Invalid variables declaration = 1 Num = 78, Stud id 1234, @ name $ = "Allen".
